

2025 Atlantic Canadian Conference on Energy System Modelling

Maria Scheller
Vice President
ICF International

Maria Scheller is a Vice President at ICF and an expert in energy market planning and techno-economic analytics. Her areas of expertise include long-term planning, environmental policy impact analysis, power market outlook and analysis, due diligence and asset valuation, policy analysis and design, competitive procurement, integrated resource and system planning, demand side resource potential analysis, transmission resource economic impact assessments, emerging technology roadmaps, electrification and load forecasting, and energy transition strategy.

Ms. Scheller has been actively advising stakeholders in the energy markets for over 30 years. She has led work related to the power and fuel markets to a variety of clients including government agencies, resource developers, power plant owners, transmission owners and developers, and electric and gas utilities. Ms. Scheller regularly serves as an expert witness on energy related matters and has testified in multiple jurisdictions in North America.
