

A new paradigm in utility system planning

Presented by: Maria Scheller, Vice President, ICF

# Industry in flux

- Reliability, clean energy and affordability:
   Utilities face immense pressure to maintain reliability, modernize the grid, decarbonize, and accommodate new loads, all while keeping rates low.
- Speed and uncertainty: With sudden increases in load growth, utilities need to meet capacity needs quickly, locking in capital spending for long-lived assets under highly uncertain future conditions.
- Complex analysis and stakeholder sophistication: As planning questions are becoming more complex, stakeholders are seeking more information.
- System interactions: T&D modernization enables more interaction of supply and demand side resources but planning tools struggle to address this.

#### **HERO** benefits

Clarity on tradeoff: Providing understanding of the tradeoffs to consumers and local economy of alternate decision pathways.

**Efficiency:** Reduced form problem can address hundreds of scenarios in the time utility planners would typically do a handful.

Transparency and collaboration: Increasing comprehension through visualization of results.

Full utility value chain: HERO addresses loadserving related investments for generation, transmission, distribution and demand side programs simultaneously.

- 10 to 20 year planning horizon
- 2 to 5 year frequency
- 1-2 years to prepare
- Limited collaboration
- Independent assumptions

#### **Outcomes:**

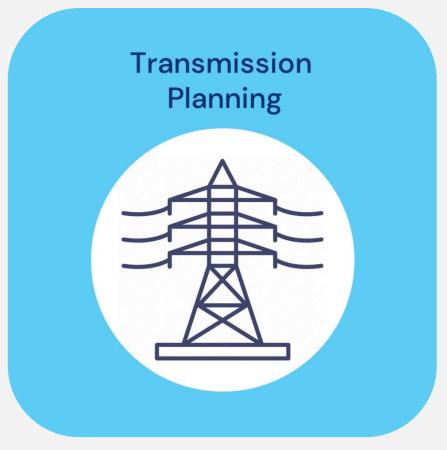

- Short-term investment plan
- Long-term indicative plan

- 10 year planning horizon
- 3-5 year frequency
- 1-2 years to prepare
- Limited collaboration
- Independent assumptions
- Single hour

# **Outomes:**

3 to 5 year capital plan

- 5 to 10 year planning horizon
- 3-5 year frequency
- 1-2 years to prepare
- Limited collaboration
- Independent assumptions
- Single hour

#### **Outcomes:**

- 3 to 5 year capital plan
- Single scenario

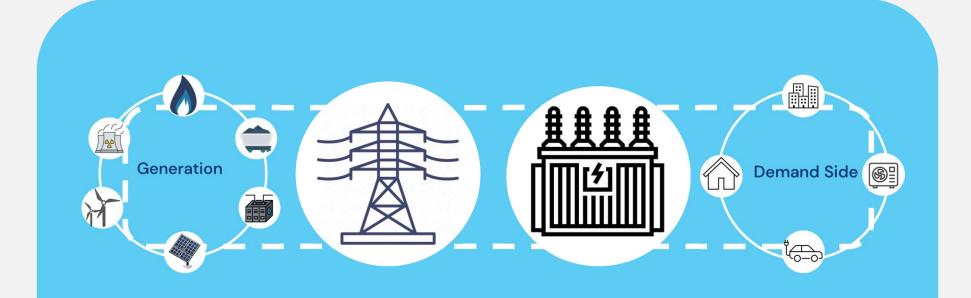

- 3 to 5 year planning horizon
- 3-5 year frequency
- 8-12 months to prepare
- Limited collaboration
- Independent assumptions
- Coincident peak
- Hourly energy

#### **Outcomes:**

- 3 year program plan
- Single scenario

# **Holistic Planning Processes**

- Same time frame
- Consistent assumptions
- Multi-scenario

- 3-6 months
- Collaborative
- Complementary

# **HERO Key Findings**

- New energy efficiency economic at 2–3% of sales
- Gas generation critical to support resource adequacy
- 10% peak reduction from Demand Response and DER

- 30% of distribution system investment \$ avoided by demand side resources
- 15% cost premium for Net Zero by 2045
- +/- 14% rate variance due to capital decisions

# **HERO Modeling Framework**

#### **Analysis** Resources Interaction **Resources Mix** Rate Impact **Optimization Model** Load a. Generation •Retail rate changes a. Peak and Energy Growth a. Across Supply and Demand b. Transmission and Distribution •T&D changes b. Hourly load profiles Infrastructure c. Distributed Resources b. Energy and capacity prices •Deferral comparisons c. Solved Distributed Resource Generation selection **Economic and Social Emissions** d. Generation Mix a. Cost inputs CapEx, O&M e. Capacity Mix a. Carbon Dioxide **Benefits** b. Fuel Prices (Builds/Retirements) b. Reductions c. Policies •Jobs, GDP, income f. Total system cost (CAPEX, c. Resource Contribution OPEX, Fuel, Incentives, CCS d. Time Series •Prices, productivity changes **Transmission** Transportation & Storage) Infrastructure a. Power flow Modeling Visualization b. Import / export capability **Cost Results** 43,407 46,557 a. Scenario Analysis (Base, High gas, Transmission 38,724 **Distribution** Constrained, Demand 33,052 31,074 Infrastructure 26,896 b. Sensitivity Analysis (Base, a. Infrastructure cost to serve Cost assumptions, 15,609 new loads Growth shortfalls) **Distributed** Resources

ICF Confidential and Proprietary

a. DER Cost and Performance

Depreciation Expense (Million \$) Return On Debt And Equity (Million \$) FOM (Million \$) OVOM (Million \$) Fuel Cost (Million \$) Other O&M (Million \$) Taxes, Other Than Income Taxes (Mil...

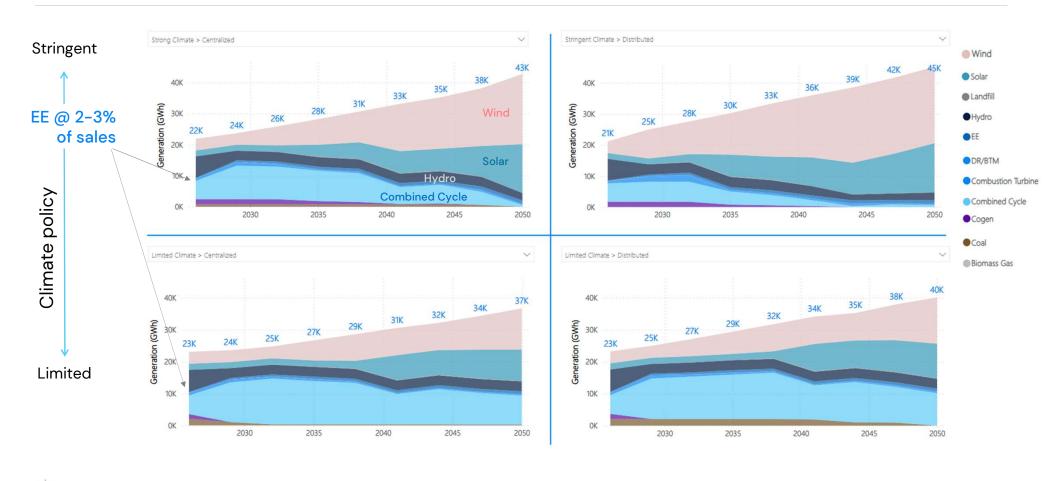

●PTC Credit (Million \$)

■T&D Required Revenue (Million \$)

**Impact** 

=\_\_=

# Each scenario results in a unique mix of resources

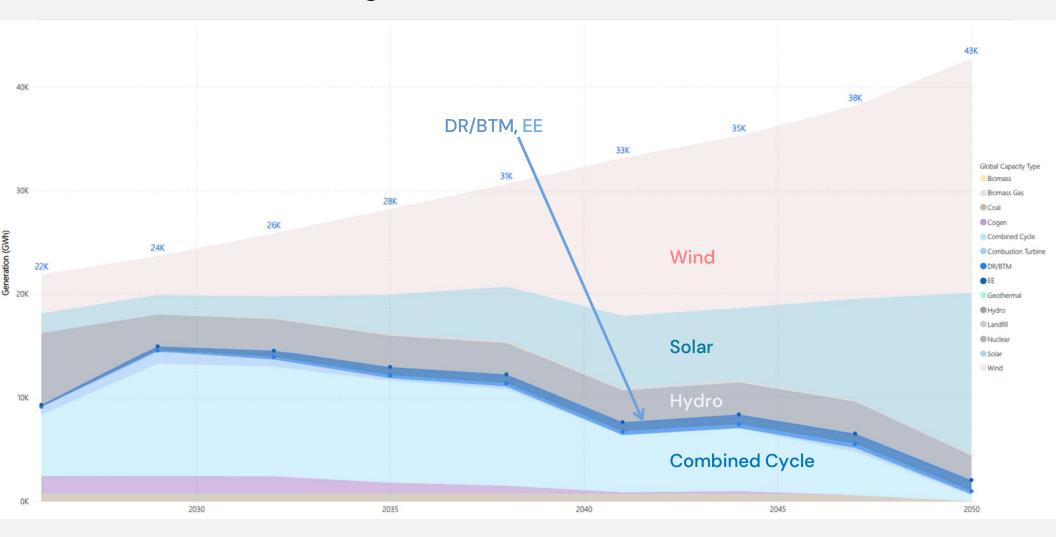

Centralized

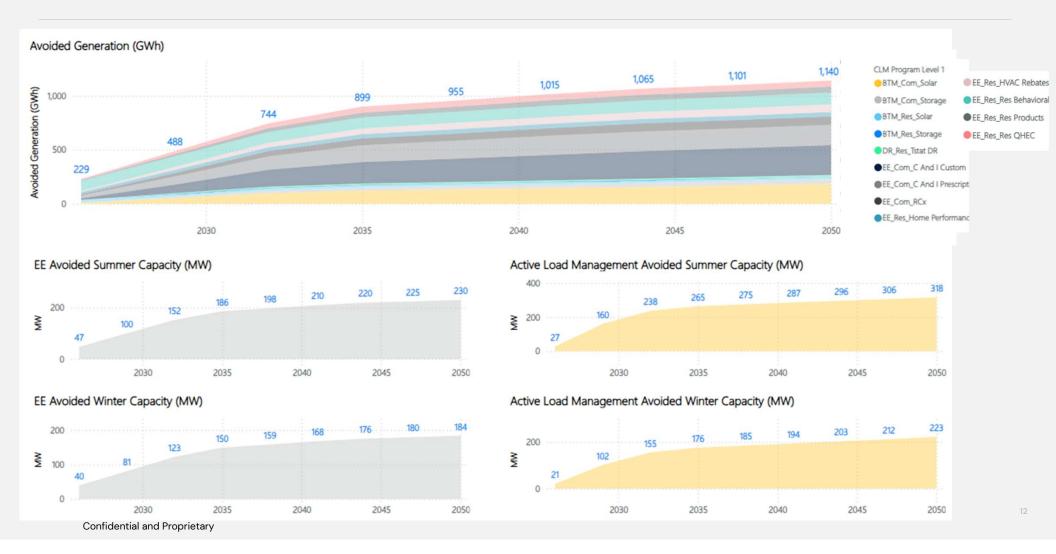

Distributed

# Role of EE/DER in meeting load

# DSM Measures play a significant role in meeting load

Scenario: Limited Climate > Centralized

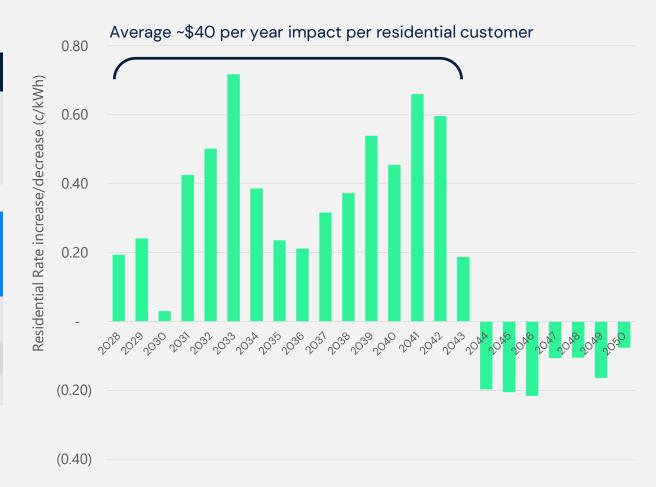

# DER has potential to avoid \$2 - \$3 billion (~30%) in distribution grid investment

# What if...innovations result in a lower demand growth trajectory

	Expected	Actual
Average Annual Energy Growth 2026-2031 2032-2050	3.3%	2.4% 1.3%

Capacity Type	Capacity Delta	Cumulative Investment Delta
Unit	MW	Million \$2022
Period	Year 2032	2028-2032
Total	753	\$926.1

#### What if...distributed resource enablement occurs

# \$3.2 Billion

PVRR saved by shifting from a central station focus to a DER focus reduces (8%)

# 1:2

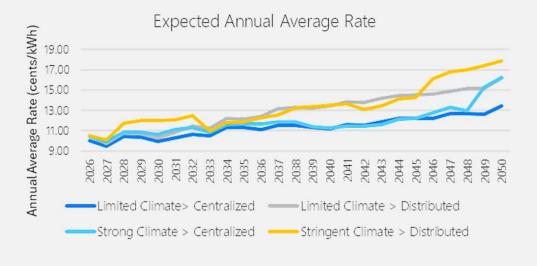

~ 750 MW premise level installations (EE and DR) avoids roughly 1400 MW of installed generation capacity

# **\$110/year**

Annualized reduction in typical residential customer electric bill

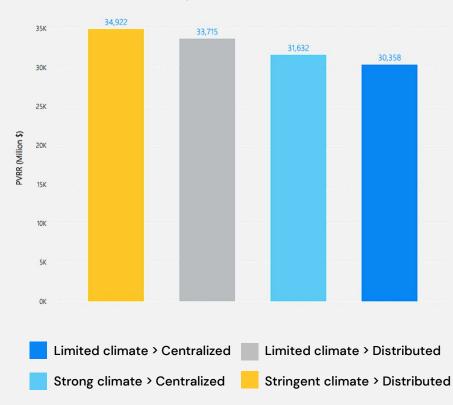

# Premium for strong climate & DER policies is only 1.6 cents/kWh or \$157/yr

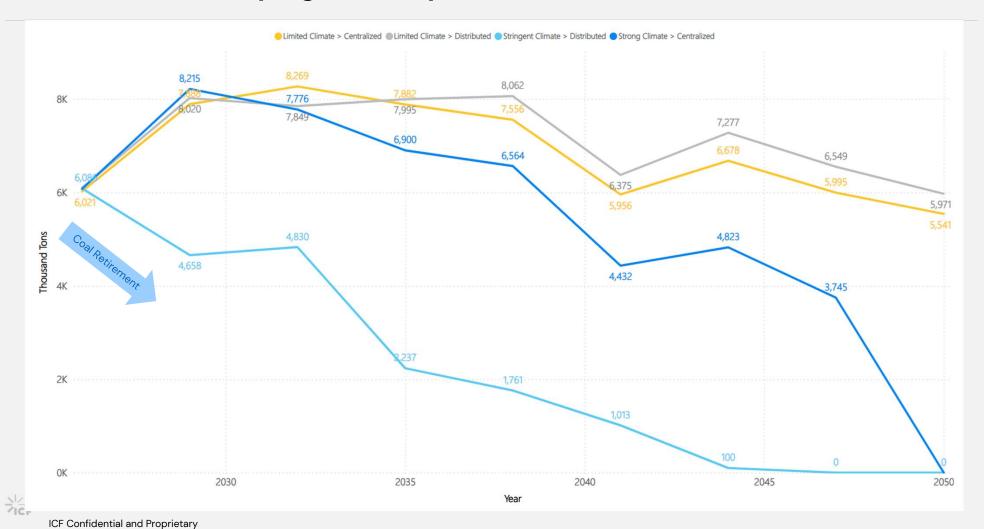

Portfolio	Annualized Rate 2026-2050 (Cents / kWh)	Δ Residential Customer Annual Expense From Stringent Climate Case
Stringent Climate > Distributed	12.61	-
Limited Climate > Distributed	12.16	(\$45)
Strong Climate > Centralized	11.51	(\$111)
Limited Climate > Distributed	11.04	(\$157)

#### PV of Revenue Requirements

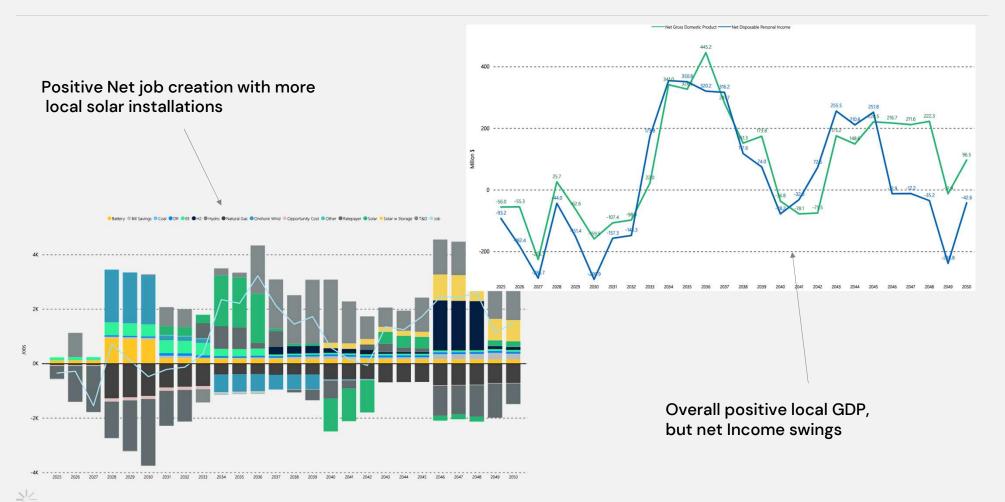

# GHG emissions vary significantly across scenarios

# Economic impacts can be assessed relative to a Reference Case

#### **About ICF**

ICF (NASDAQ:ICFI) is a global consulting and digital services company with over 7,000 full- and part-time employees, but we are not your typical consultants. At ICF, business analysts and policy specialists work together with digital strategists, data scientists and creatives. We combine unmatched industry expertise with cutting-edge engagement capabilities to help organizations solve their most complex challenges. Since 1969, public and private sector clients have worked with ICF to navigate change and shape the future.
